The Orbit 60 Series is Bently Nevada’s most advanced condition monitoring and protection system that will help you make smarter decisions faster—and accelerate your journey to digital transformation.

It collects and processes data on the edge at high speed—equipping operators with the right analytics and machine-health information needed to optimize performance and maintenance.

Robust cybersecurity

The Orbit 60 Series is the first intrinsically cybersecure vibration monitoring system with a built-in data diode—creating a safe industrial environment for data processing. It’s designed to ISA 62443 Cybersecurity Standard.

Enhanced analytics

The system has 100x higher signal processing power than the industry standard. It offers best-in-class data resolution across all machine types, and seamlessly connects to System 1 software for advanced data analysis—delivering highly accurate machine-health information at the speed you need.

Continuity

The Orbit 60 Series performs high-resolution offline data storage for incidents—ensuring continued access to data even during a network interruption. It has SIL 2 and 3 Certification for confidence through redundancy measures.

Scalability and flexibility

The architecture can support up to 80 dynamic data channels per rack (versus industry average of 50), so you can monitor more machinery with less effort and lower capital expenditure. With scalable architecture, a modular remote I/O system, and the ability to connect to third-party systems—the Orbit 60 Series can cover a wide range of assets, from critical machinery to balance of plant—making it the ideal platform for future expansions. It’s also the only turbomachinery monitoring system that can be distributed or rack-based, which maximizes your installation and operating flexibility.

Baker Hughes, a GE company (NYSE: BHGE) is the world’s first and only fullstream provider of integrated oilfield products, services, and digital solutions. We deploy minds and machines to enhance customer productivity, safety, and environmental stewardship, while minimizing costs and risks at every step of the energy value chain. With operations in over 120 countries, we infuse over a century of experience with the spirit of a startup—inventing smarter ways to bring energy to the world.
